

WEBSITE CREATION

For creating a website, we should own the Domain name. The Domain name can be either bought from service providers. However, there are some free domain names they can be owned for free.

STEP-1: Type “Freenom” in google.

Click the first link www.freenom.com

STEP-2: Check for availability for the name you wish to have for your website. A list of paid domains and free domains will appear in the page. Select a free domain and proceed to checkout.

vaidhyaprakash

 Sign in

 Continue with Facebook

Sign Up to the Freenom website using google account.

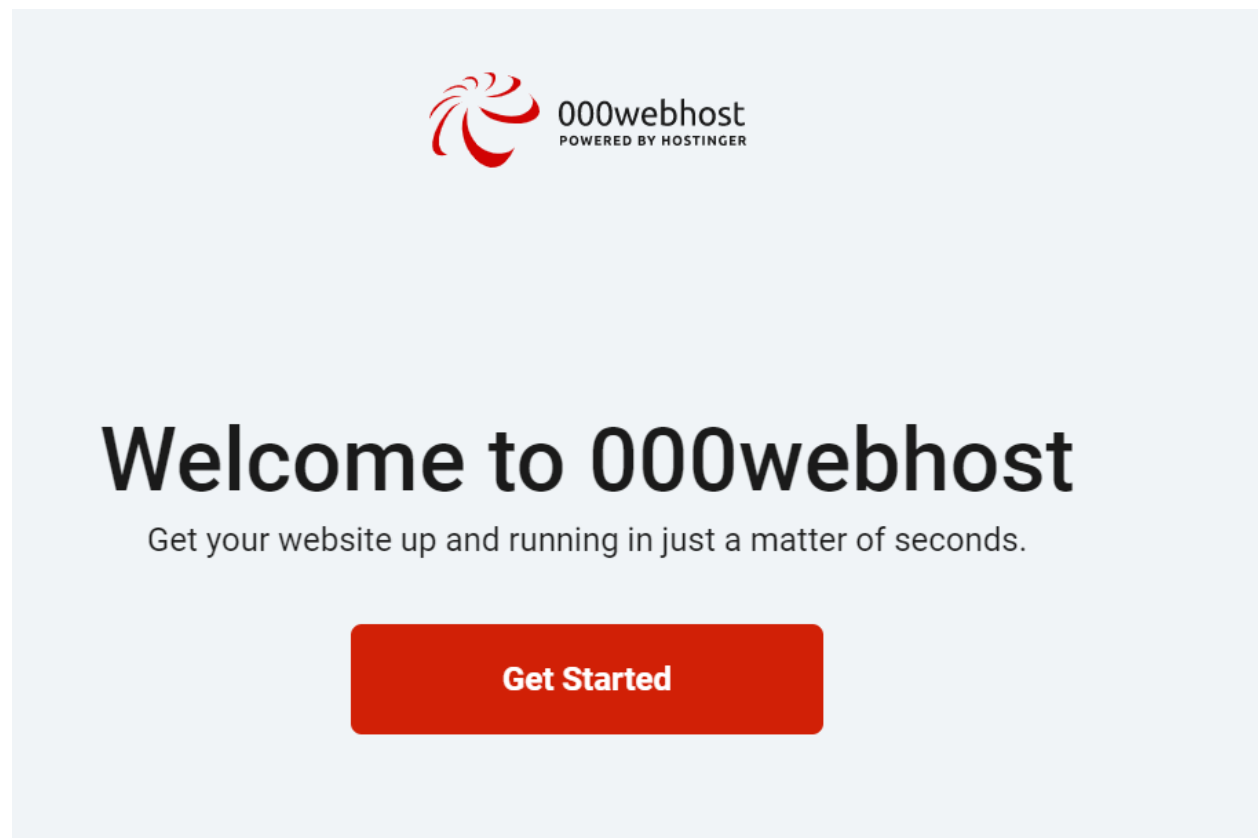

Get your free domain name.

Now we need to create a website using webhost.

STEP-3: Type 000Webhost in Google and Select www.000webhost.com

Sign up into the Webhost.com with google account.

STEP-4: The window will appear as follows.

Skip all until the window to create a website appears as follows:

Create Your Website

Website Name (optional)

PUN@MyM^a5vy4!Vs4262

☒ Show password

[GENERATE PASSWORD](#)

Next

[Skip](#) >

Enter a password for your website and the name for your website is optional, by default it will assign a name for your website.

STEP-5: Come back to this window without adding any template.

Website list

000webhost powered by HOSTINGER

My Sites Power Store Help

Nice, here is your Websites list

Go into your Website by clicking on it or click + button to create a new Website.

voided-roadside

● Status: running

<https://voided-roadside.000webhostap...>

HOSTINGER

- ✓ Powerful Control Panel.
- ✓ 24/7 Live Support.
- ✓ Free Domain, Email and SSL.

GO PREMIUM

Now we already have our Domain name from the freenom website and another name from 000webhost.com, We have to link the freenom website server with the 000webhost server inorder upload our code files.

We use the freenom website since, in the webhost.com the website name comes as follows:

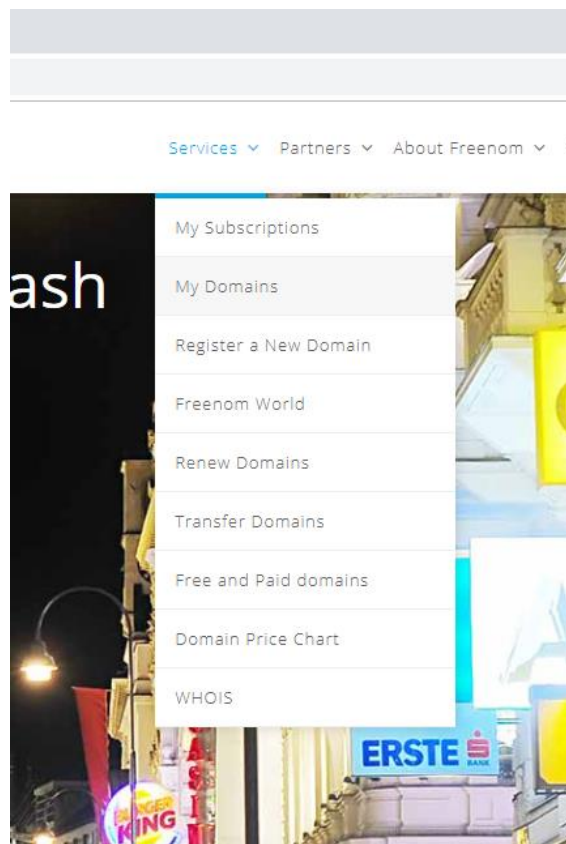

<https://website-name.000webhostapp.com/>

whereas in the freenom our website name will be as follows:

www.website-name.tq

The extensions for free websites in freenom.com are tq,gq,ck,ml,etc.

STEP-6: Go to Freenom Website, Sign In to your account. Click Services=>My Domains

You will see your Domains listed. Click Manage Domain.

Client Area - Freenom

Select the Use Custom nameserver and Enter the data as shown below.

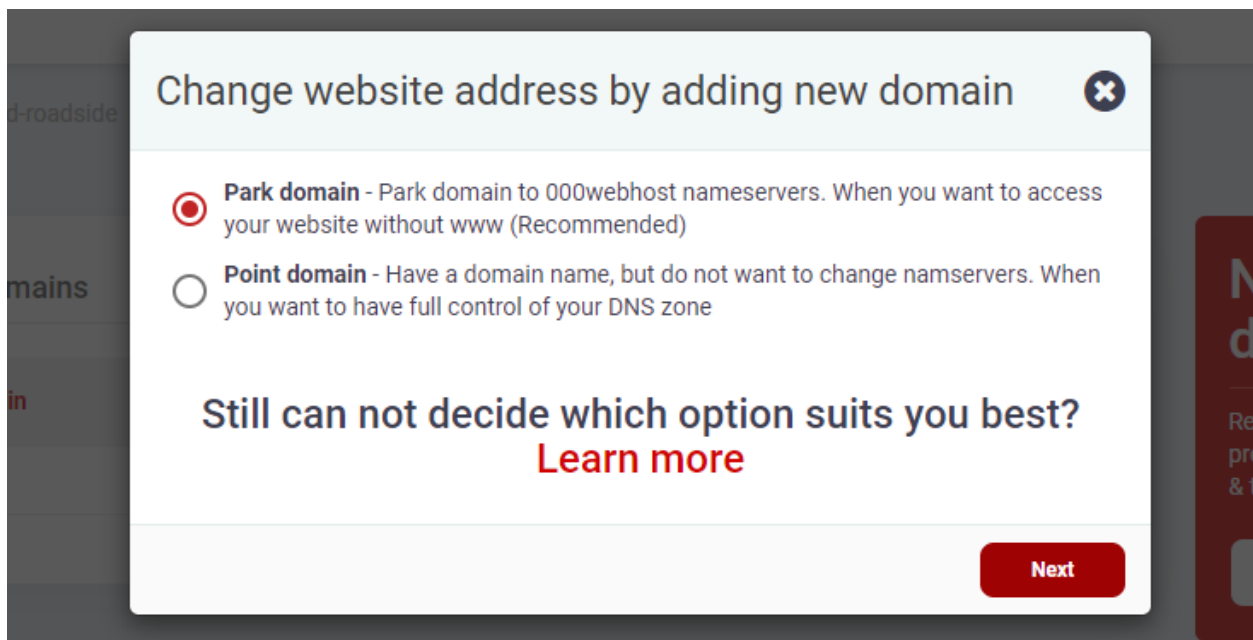

STEP-7: Now Click Manage Website in the window shown in Step 5.
Click Tools=>Set Web Address

Click the add domain name button in the window as follows.

Choose the Park Domain.

Enter your website name in the window and click Park domain.

Park Domain

Domains must be registered with a valid registrar before they can be parked. They will not be functional unless they are configured to point to our DNS name servers - **ns01.000webhost.com, ns02.000webhost.com**

Domain Name

Website Name Created in Freenom

You can only use numbers, latin letters and underscores.

Connect domain to website

Your website musicwolf will start using the following domain after you proceed:

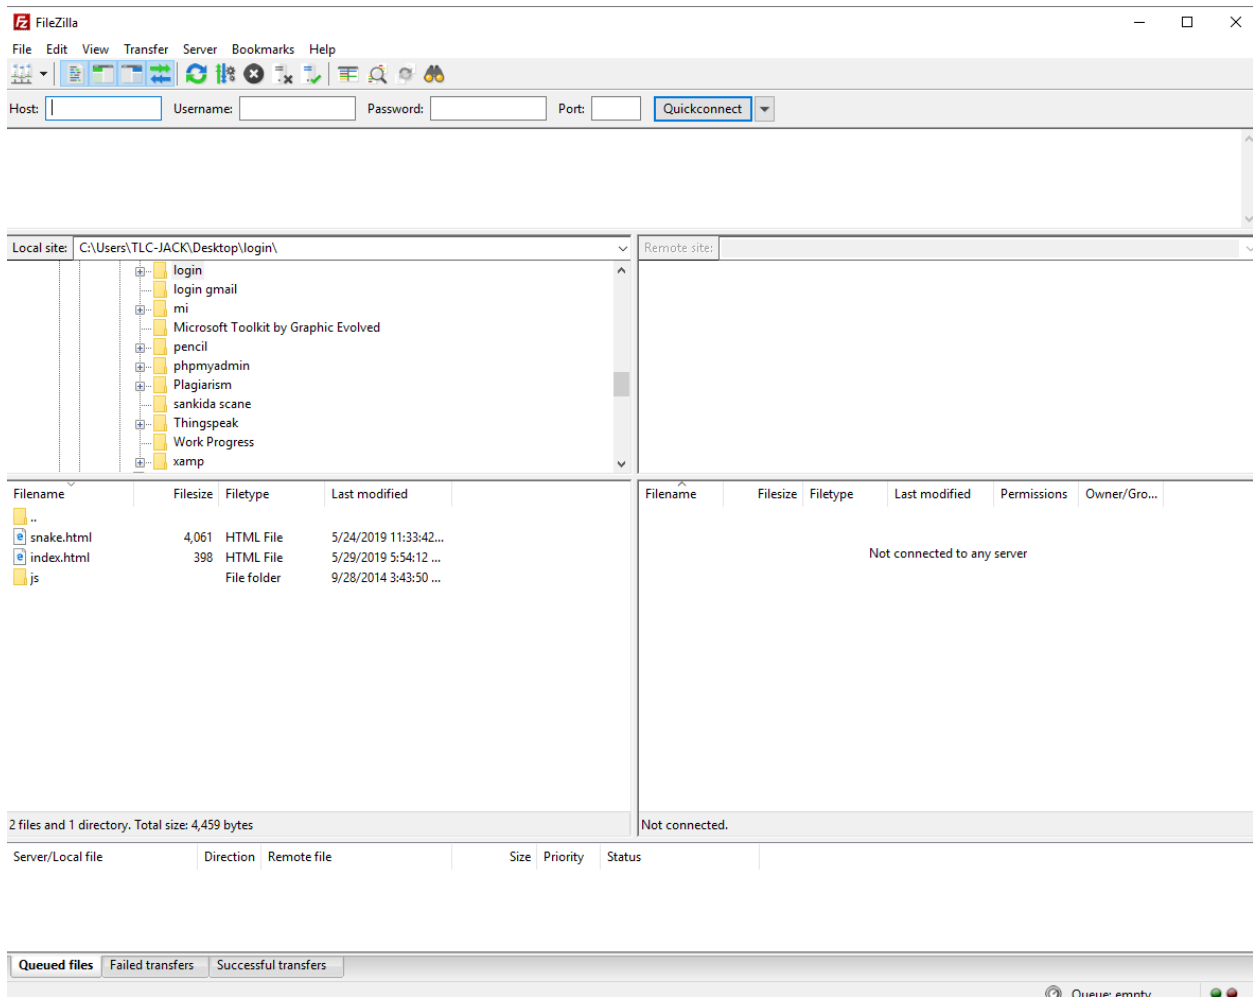

musicwolf.tk

☐ I want to use a subdomain

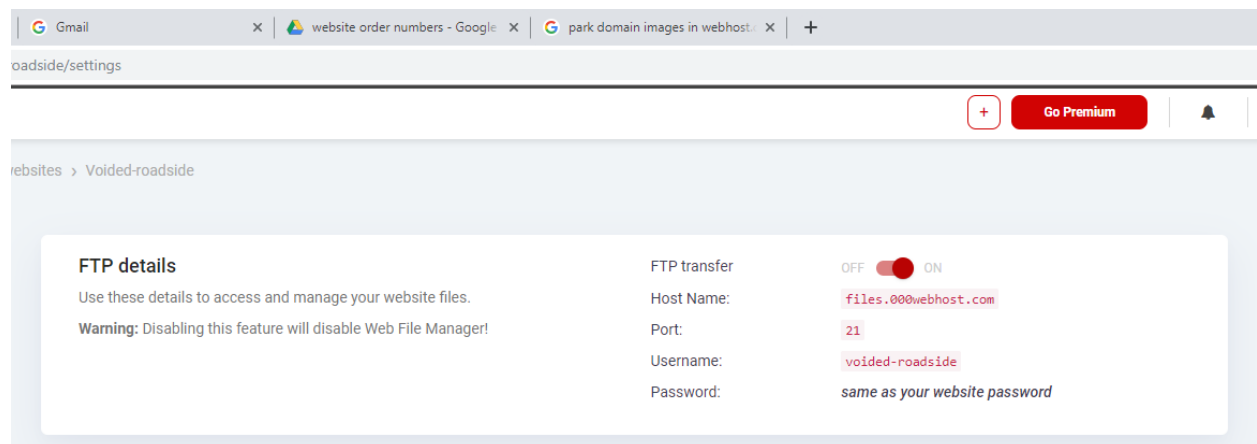

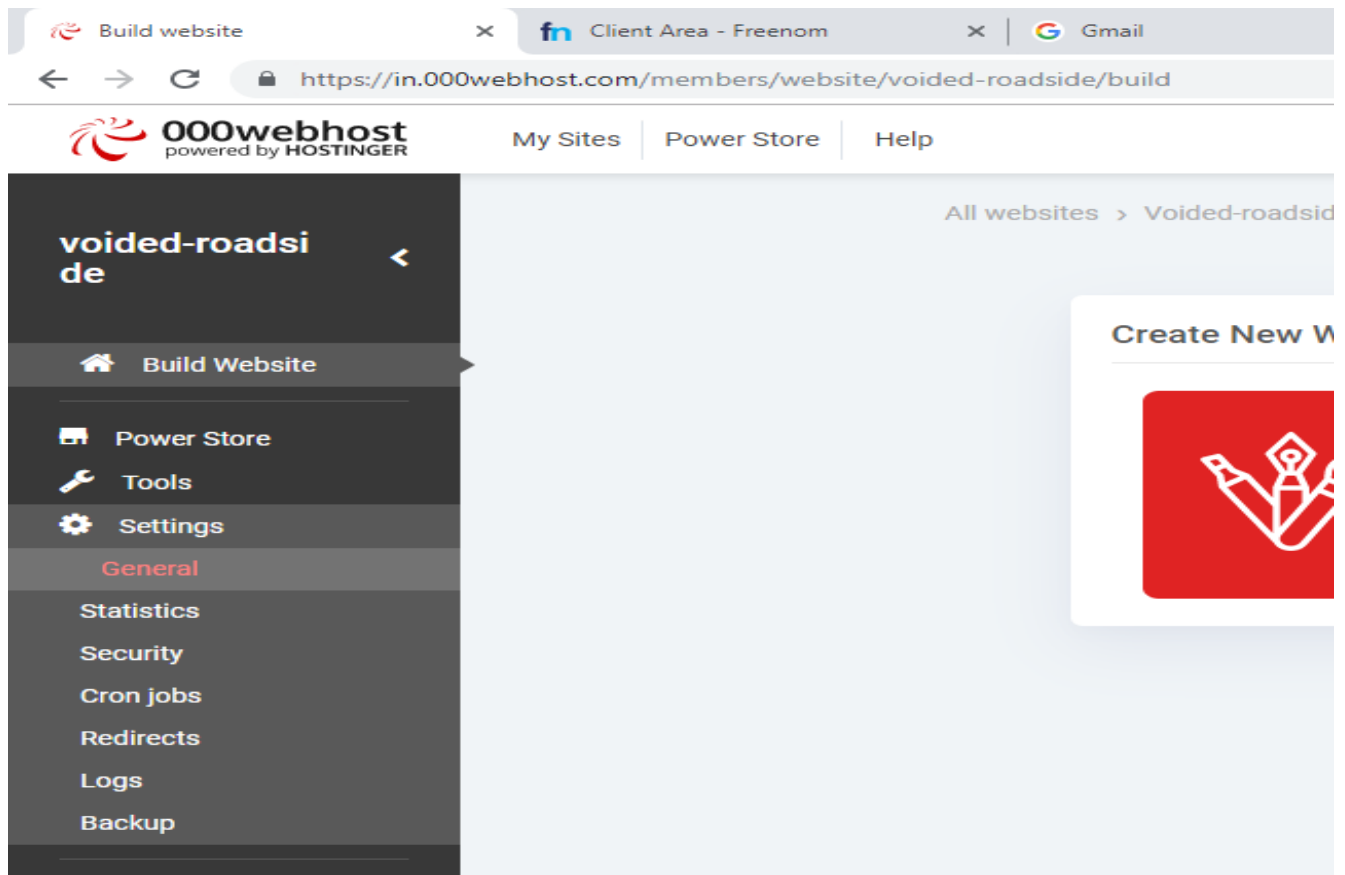

Connect

Wait for some time and the Freenom website will be linked to the Webhost server.

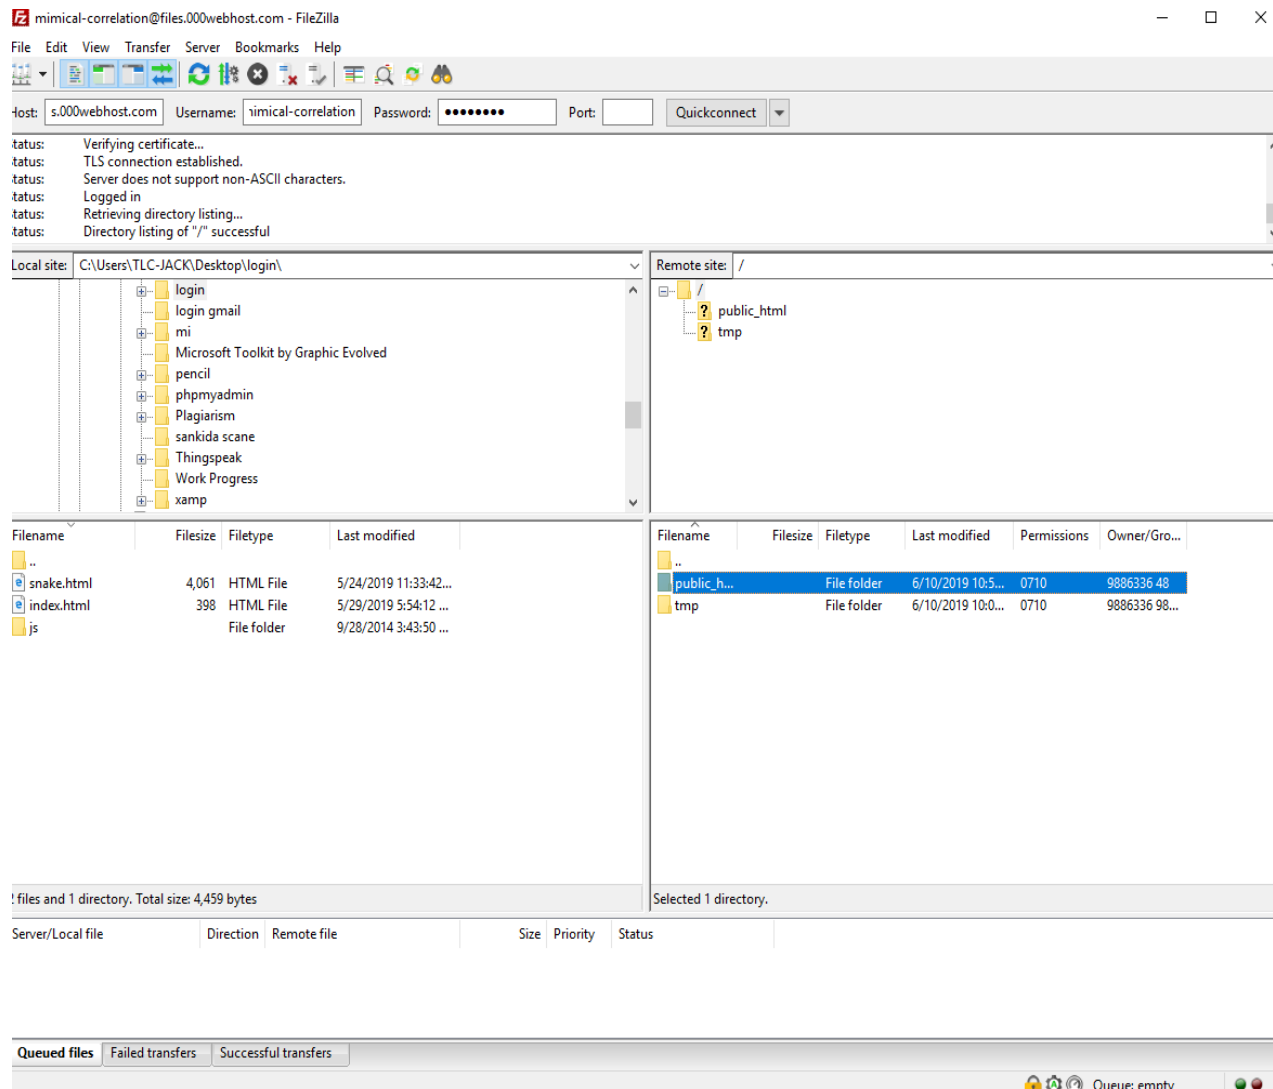

STEP-8: Download Filezilla app. After Downloading and Installing, open it.

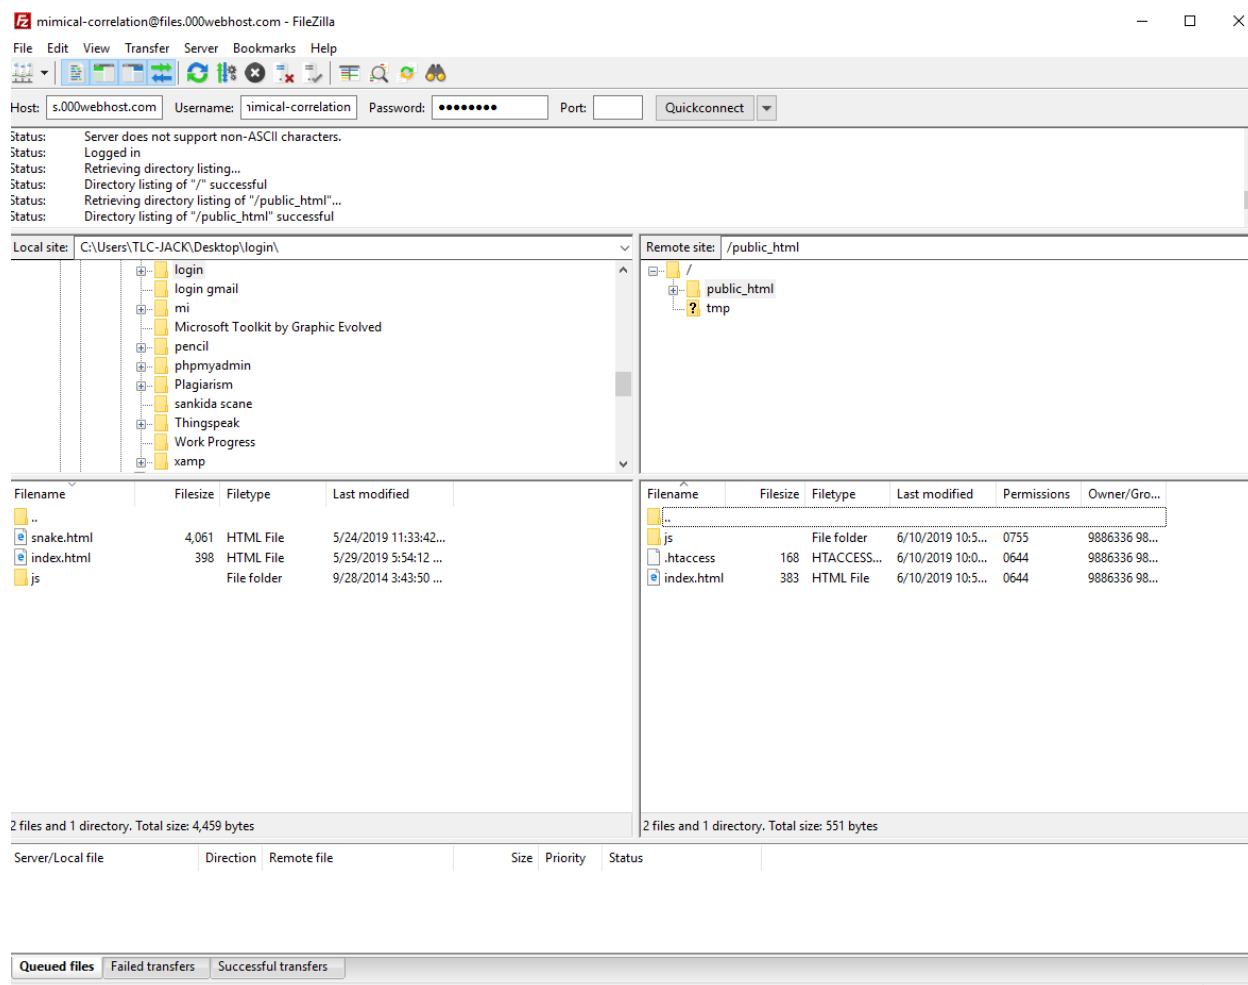

STEP-9: Go to webhost.com Click Settings=>General Settings and copy the Host, Username from there and paste it in the filezilla.

STEP-10: Press Quick connect Button in Filezilla app. It will connect and show the window as follows.

STEP-11: Open the public.html folder and paste your code inside the folder with the main file name as “index.html”.

STEP-12: Now type your freenom website in the internet. You will find your uploaded code files getting executed.
